

one claim: the minimum is m

	UPPER BOUND		LOWER BOUND
	$\exists P. P = m \wedge P \models M$		$\neg \exists P. P = m-1 \wedge P \models M$
the artifact	a circuit, handed to you		<i>no object is produced</i>
what can check it	re-execution	17.5 μ s	
	Z3, over every input	2.6 s	
	the Lean 4 kernel	5.8 s	
			<i>nothing to re-execute, nothing to check</i>
what reaches the reader	a machine-checked certificate		a solver's word
